Art

The Shock of the New - Robert Hughes 0-500-27582-3

Ways of Seeing - John Berger 978-0141035796

12 Gallerists: 20 Questions - A collection of Interviews with 12 London Gallerists.

12 Gallerists: 20 Questions seeks to de-mystify the world of contemporary art. Sarah Rowles asks 12 respected London gallerists how the art world works.

Who values art? How is it valued? Who buys it? Who do gallerists sell to and how are prices decided upon? How are artists selected and how do they make the transition from art school, to the marketplace, to the museum? What's the difference between the primary and secondary market? What types of gallery spaces exist and where does an artist start?

Sanctuary: Britain's Artists and their Studios (Thames & Hudson, ISBN: 978-0-500-97707-1) examines the lives and work places of 120 contemporary artists living and working in Britain through a series of interviews and essays.

Q-Arts books aim to make art education and the workings of the contemporary art world more transparent.

Vitamin P: New Perspectives in Painting (Phaidon, ISBN: 0-7148-4446-2)

Classical Civilisation

The following is just a starting point. The Department holds an extensive collection of academic books by Classical scholars and translations of many original Latin and Greek texts. Department staff are happy to advise individual students at any point.

Penguin Classics translations are readily available for the following. The Department also has spare copies which it can lend.

Greece

- **The Iliad** - Homer
- **The Histories** - Herodotus
- **History of the Peloponnesian War** - Thucydides

Rome

Metamorphoses - Ovid

The Twelve Caesars - Suetonius

The Annals of Imperial Rome - Tacitus

Res Gestae Divi Augusti (*A funerary inscription of the first Roman emperor, Augustus, giving a first-person record of his life and accomplishments -copies in the department*).

Work by well-known academics

The Department stocks a number of volumes from the Classical World Series including: Christopher Carey, Democracy in Classical Athens and John Patterson, Political Life in the City of Rome.

Classics: A Very Short Introduction (Very Short Introductions Series) - Mary Beard and John Henderson - *Look at the bibliography for further reading.*

Confronting the Classics: Traditions, Adventures and Innovations (especially Chapter 1) - Mary Beard

SPQR: A History of Ancient Rome - Mary Beard

An Epic History of Greece and Rome - Robin Lane Fox

Rubicon - Tom Holland

Homer: A guide for the perplexed - Ahuvia Kahane

A Guide to Greek Theatre and Drama - Kenneth McLeish

The Mighty Dead: Why Homer Matters - Adam Nicholson

The Gracchi to Nero - H.H. Scullard (*found on every university reading list for classics – very useful for Year 13 study*).

An Introduction to Greek Art - Susan Woodford

Watch and Listen

Dr Michael Scott's BBC three part documentary "The Greatest Show on Earth" is available on You Tube. This relates to the Greek theatre as well as other aspects of Ancient Greek politics and Society and introduces a number of well-known contemporary academics including Professor Paul Cartledge and Professor Edith Hall.

Civilisations BBC iPlayer Includes aspects of Greek and Roman civilisation within a global context and introduces some key themes for consideration when thinking about Classics.

The Radio 4 archive has an extensive library of In Our Time podcasts relating to Greece and Rome. Academics discuss the significance of texts, events and people from the ancient world with the presenter, Melvin Bragg.

Computer Science

This is a small selection of books that you may find it interesting to read or browse through as background to Computer Science. You are not required to read any of them as part of the A-Level course, but we hope you may wish to look at some of them; they may be useful to mention in your UCAS personal statement

General

- **Computer Science: An Overview by Glenn Brookshear.** This is a good big textbook that covers a lot – a good book to dip into.
- **Algorithmics, the Spirit of Computing by David Harel, Addison-Wesley.** This is an excellent introduction to algorithms, most suitable for those who already have some programming experience.
- **Secrets and Lies: Digital Security in a Networked World by Bruce Schneier.** The book of choice for information security, by a leader in the field.
- **The Signal and the Noise: Why so many predictions fail – but some don't by Nate Silver.** This is an excellent introduction to modelling and predicting complex system behaviour. The chapter on how Gary Kasparov was beaten by an IBM built computer in chess is worth reading on its own.
- **The Golden Ticket: P, NP, and the Search for the Impossible by Lance Fortnow.** One of Amazon.com's Best Science Books. One of Choice's Outstanding Academic Titles. Honorable Mention or the PROSE Award in Popular Science & Mathematics, Association of American Publishers
- **Quantum Computing Since Democritus by Scott Aaronson (Cambridge University Press).** A tour through some of the deepest ideas of maths, computer science and physics...covers an amazing array of topics. Beginning in antiquity with Democritus, it progresses through logic and set theory, computability and complexity theory, quantum computing, cryptography... Aaronson's informal style makes this fascinating book accessible to readers with scientific backgrounds."

Internet

- **Weaving the Web: the Past, Present, and Future of the World Wide Web by its Inventor by Tim Berners-Lee.** The title is self-explanatory!
- **Where Wizards Stay Up Late: The Origins of the Internet by Katie Hafner and Matthew Lyon, Simon and Schuster.**

Entertainment

- **Logicomix: An Epic Search for Truth by Apostolos Didactylos and Christos H. Papadimitrou.** A graphic novel for all who want to know more about the history and nature of computing.
- **Gödel, Escher, Bach: an eternal golden braid by Douglas Hofstadter.** This book should be compulsory reading for any computer enthusiast who wants to understand the deep structures of computer science and the way those structures are shared with subjects such music and art.

History

- **The Facebook Effect by David Kirkpatrick.** One account of the astonishing rise of Facebook from its origins in a college dorm room.
- **The Cathedral & the Bazaar by Eric Raymond O'Reilly.** A short history of the open source movement.
- **The Cuckoo's Egg by Clifford Stoll.** An old but classic account of tracking a hacker, a very readable and lively story with some internet history in there too. Surprisingly, this is now out of print: if you can find it in a library, it's a gripping story.
- **The Thrilling Adventures of Lovelace and Babbage: the (mostly) true story of the first computer by Sydney Padua.** Lively – and the explanation of the Analytical Engine is the best around. Sydney Padua is associated with the department.

Cryptography and Information Security

- **The Code Book by Simon Singh.** A lively account of codes and code-breaking by a Royal Holloway alumnus.
- **Traces of Guilt by Neil Barrett, ISBN-10: 0552150886.** A good read with some technical detail.

Mathematics

The best preparation for maths courses at the top universities would be working towards STEP exams. We run weekly, after school sessions to support students in their preparation for this. Our course is based on a correspondence course initiated by Cambridge university. See: <https://maths.org/step/>. All of the assignments we use are on the VLE along with the post-mortems. The book '**STC Siklos book of Advanced Problems in Mathematics**' is also good for university entrance exam preparation, a copy of which can be obtained in pdf format, also from the VLE.

Other resources to extend and challenge students aspiring to study Mathematics further at university include:

- Nrich website (nrich.maths.org) - a good source of problems that promote thinking skills and extend mathematical ability.
- Lectures by Marcus Du Sautoy available on Youtube.
- '**Alex's Adventures in Numberland**' by Alex Bellos is a good starting point for exploring a wide range of mathematical topics in more detail; further interest in particular areas of Maths may follow from this and so it may be a good 'first book' for students interested in pursuing Maths at a top university in the future.
- Any book by Simon Singh, e.g. **Fermat's Last Theorem**.
- David Wells '**Curious and Interesting**' Series of books
- '**Zero: The Biography of a Dangerous Idea**' by Charles Seife and as an introduction to statistics. '**Proofiness: The Dark Arts of Mathematical Deception**' by the same author.
- phys.org/science-news/mathematics for articles linked to journals.
- AEA past exam papers see Edexcel website.
- '**Men of Mathematics**' by E.T. Bell was written in 1937, but is still a very readable history of some prominent mathematicians and the mathematics they developed.
- '**1089 And All That**' by David Acheson is a short and entertaining look at a variety of interesting applications and puzzles.
- **The Mathematical Gazette** is the quarterly journal of the Mathematical Association. This is mainly aimed at school teachers and college and university lecturers. However, each issue has two or three 'student problems' to be tackled by able and interested sixth form students. Each issue contains solutions and discussion of the previous problems. Two related books are '**Problem Pages 14 - 19**' ISBN 0906588456 and '**Student Problems from the Mathematical Gazette**' ISBN 0906588499, both published by the Mathematical Association.

Music & Music Technology

All students of A Level Music should have their own copy of the **Anthology of Music** (listed below). This also includes suggestions about wider listening/recommended pieces for knowledge expansion.

It is recommended that any pieces/albums etc. mentioned in the publications should be explored further by the students of both courses, listening to as much Music as they possibly can, whether they are examining it from a theoretical or technological background. All printed publications are easily accessible from Amazon.

Music

- Winterson, Julia - **Edexcel AS/A Level Anthology of Music** (Publisher - Pearson)
- Grout, Donald - **A History of Western Music** (Publisher - Norton)
- Taylor, Eric - **The AB Guide to Music Theory Part II** (Publisher - ABRSM)
- Stanley, Bob - **Yeah Yeah Yeah: The Story of Modern Pop** (Publisher - Faber)
- Butterworth, Anna - **Harmony in Practice** (Publisher - OUP)
- Dimery, Robert - **1001 Albums You Must Hear Before You Die** (Publisher - Cassell)
- Ventura, David - **Film Music in Focus** (Publisher - Rhinegold)
- **Grove Music Online** www.oxfordmusiconline.com This is a very well respected music publication, originally a printed musical encyclopaedia. This requires a subscription - you can either subscribe as an individual, through an institution or public library.

Music Tech

- www.musictechstudent.co.uk Excellent website which we already subscribe to as a school (Tech students are given login when they start the course). It also includes details of books/articles to access.
- www.allmusic.com A fantastic website for finding out about and listening to the music of different artists and genres
- White, Paul - **"Basic"** series e.g. Basic Microphones and Basic Live Sound (Publisher - all Sanctuary)
- Winterson, Julia - **Pop Music: The Textbook** (Publisher - Edition Peters)
- Winterson, Julia - **Rock and Pop Theory: The Essential Guide** (Publisher - Edition Peters)
- Dimery, Robert - **1001 Albums You Must Hear Before You Die** (Publisher - Cassell)
